

Plan Progress for CoDev ScranPlan Project

C21 - This user story implements notification system so makes sense to move down plan to when the other notification stories start to be implemented.

C34 - Story taking time to implemnt as the data structure needs to change to allow the list of ingredients and their values to be changed.

2nd Iteration

C12 - Off plan for foreseeable future due to COVID-19. No API access

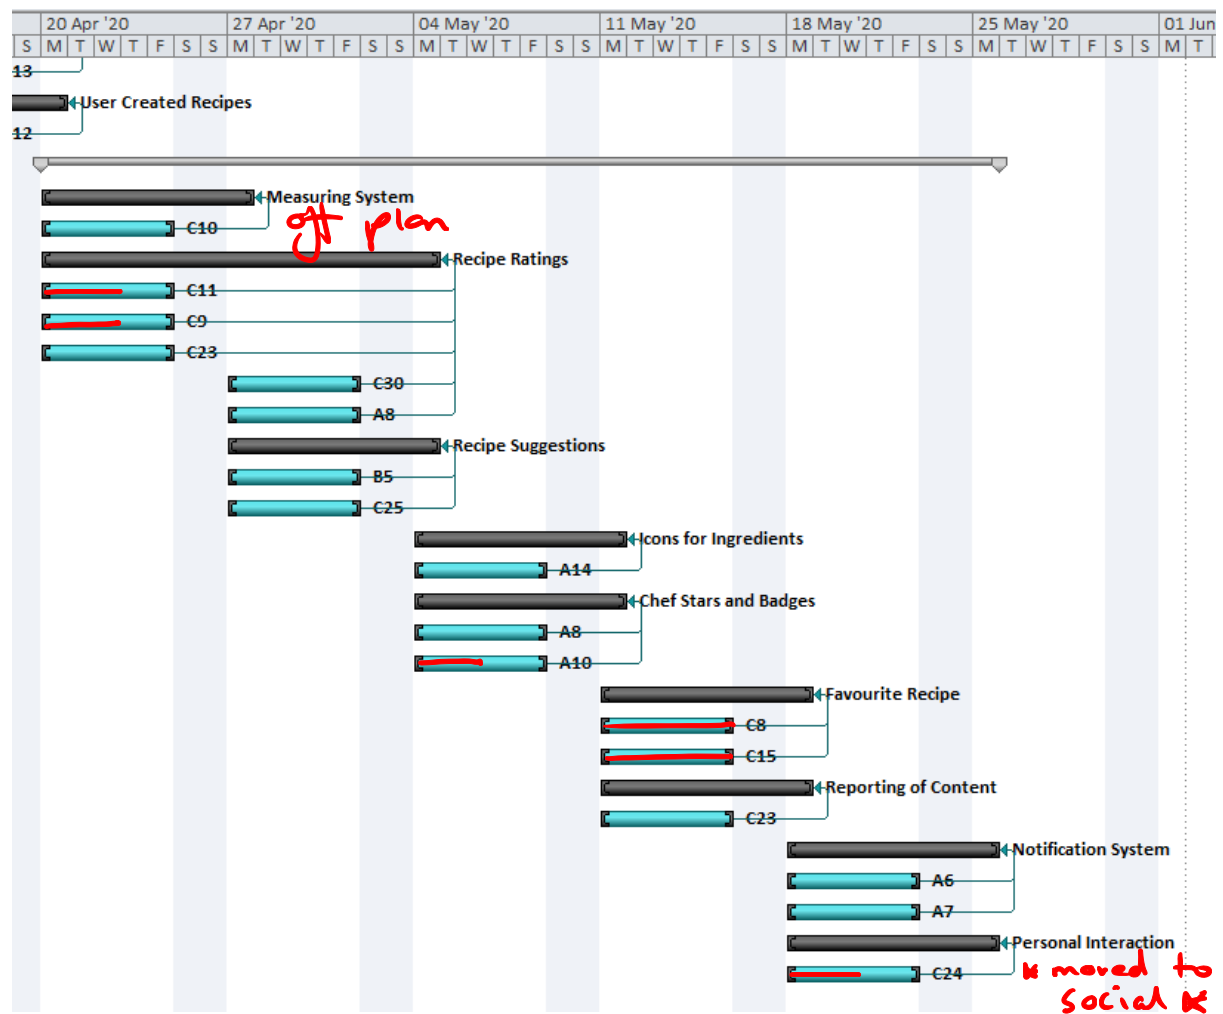

C32 & A13 - Healthy Living System moved to the bottom of the plan as it isn't a main feature for the application anymore with the direction towards a social media application.

The social aspect has made some great strides in such a short time and is nearly done. Extra user stories have been created for the Social side and this is reflected in the change log.

User created recipes is coming along nicely although it has taken a new direction and was slightly redone. Should be completed soon.

Overall, the second iteration is behind schedule even with the changes to the plan. The focus now for iteration three is to make sure all the main features get completed and up to a high standard before the deadline.

3rd Iteration

C10 - Now off plan. Adds no real value to the application.
