### Plan Progress for Codev ScranPlan Project

A11 + A4 are currently being redone by Joe Butler. As we have started building on the social side of things it has become apparent that the profile was slightly inadequate for our needs. Nothing to do with lack of work just a group oversight. That is being rectified.

Meal planner is nearing completion. Working out some issues and adding a couple small features and that should be complete in the next week or so.

## 2<sup>nd</sup> Iteration

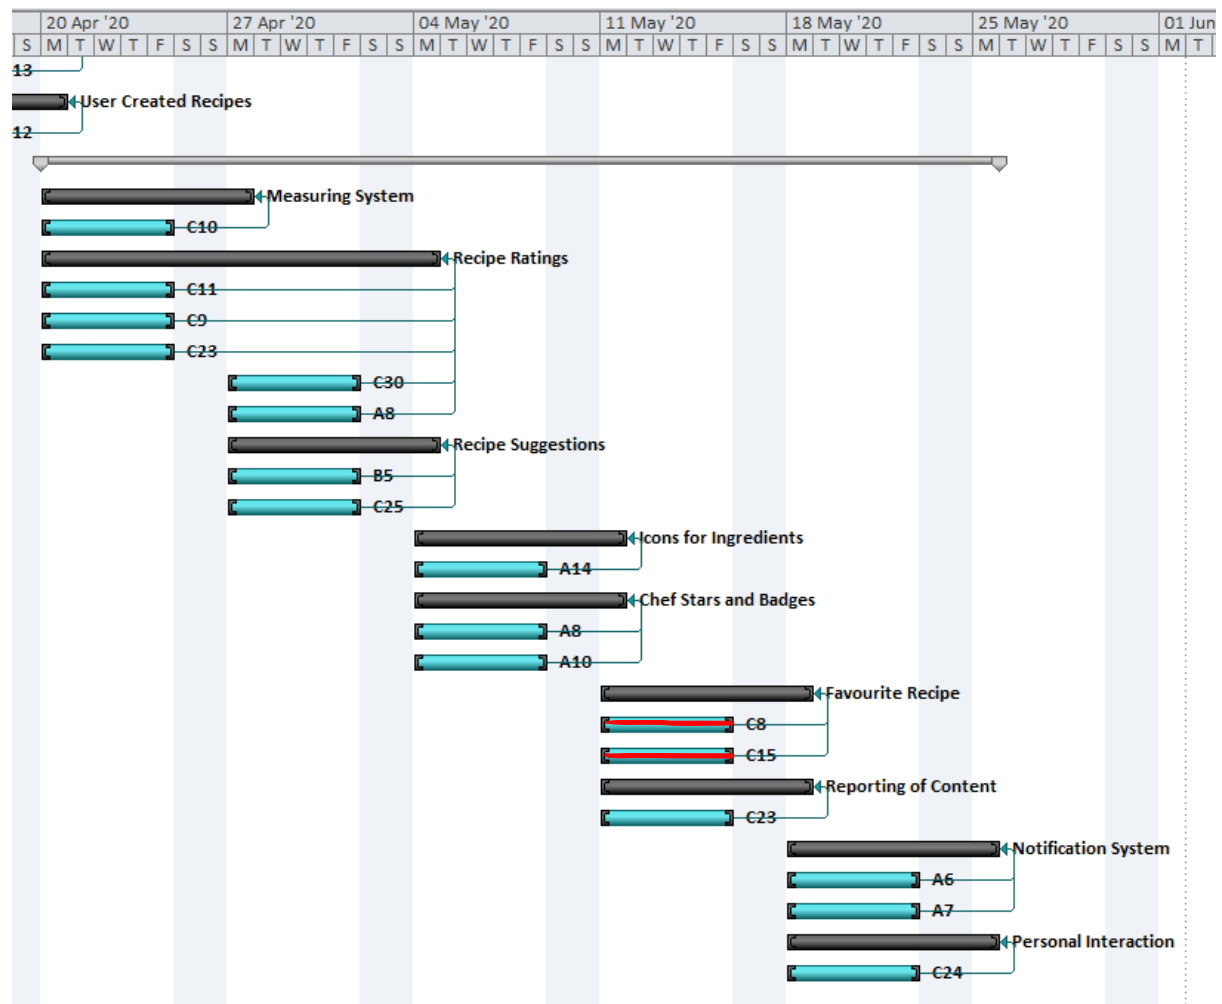

1) C12 is currently on hold and may be stricken off the plan completely. C12 story was gathering price and nutrition information for the recipes but as of COVID-19 lockdowns, the supermarket API's have been taken down and are unuseable. I may take the decision of taking it off the plan because i'd rather not have members of my team putting time in to adding data for all the ingredients we will use.

2) A12 has been moved up the plan as it is actually a big feature for us and deemed more important. James Clawley has made a start on the user created recipes as he built the XML parser for the presentation, knowing it inside and out.

C13 was done as a part of the early searching and sorting filters.

### 3<sup>rd</sup> Iteration

Favourite recipe feature completed ahead of schedule. Task was given to Jun as a way of getting him introduced into the GitHub, Android system. It was an easy story to get his teeth into from his early struggles. He seems to be managing ok currently.
