<p>All tests pass in sequence.</p> <p>Added tests that check not just if the what ever is on screen is visible but if it also matches what currently exists within the UserInfoPrivate class (a local copy of the Firebase data).</p> <p>Also made sure the new preferences icons and associated dialogs are visible and correct. Kudos support has also been added.</p>																					
Comments:																					

## Test Report

All of the following test results are in addition to existing results conducted prior.

Still need to test retrieval from a non-local source. IE directly from Firebase and not from data stored within the UserInfoPrivate class.

This will probably come under the Algolia searching story though for Authors.

Tester(s)	Joe Butler
