Comments/Issues/Notes:			
<p>As requested by programming manager, search bar has been added to the action bar, a search options button has been added alongside this search bar. Once the search button is clicked, the Scran Plan name is removed, and the search bar is activated. By default, user settings will be applied to the search, these settings can be altered in the options menu.</p> <p>User can select settings with a tab layout holding check boxes.</p> <p>Once a user uses the search bar and searches an item, a query will be generated to reflect their preferences, and this will be displayed within a pop out fragment. This fragment consists of an infinite scroll that will load 5 items at a time, consisting of all items that match the user's specification.</p> <p>If nothing is returned, the user is alerted. The scroll will continue until the query returns no more results.</p> <p>C1 has been updated to reflect a query-based response based from the user's settings. These are again endless scrolls to show users the recipes they are most likely to want to see on the home page. A horizontal scroll view is maintained.</p> <p>The home page has also been moved to enable a root page between login and home.</p>
