Test Report Title:	User created recipes	Date	01/06/20
User story:	A12		

Unit Test Results:

Due to the functionality of creating recipes and viewing the presentation, all tests were done manually.

Other Testing done:

Manual testing:
- Creating a recipe
- Making sure a recipe cannot be created if details in the form are not filled out
- Adding elements (images, videos etc.) to slides and making sure they are shown correctly
- Ensure pictures and videos are shown full screen if text isn't present and resized correctly if text is present
- Creating multiple recipes to ensure timestamps are saved correctly and the recipes are visible on the user's profile
- Graphics elements should be saved in the correct format so that, when shown on the presentation, there is no warping or disfigurement
- Viewing the created recipe in the Firebase and checking the created XML file to ensure everything is uploaded and stored correctly

Comments:

Audio testing will be done on a separate test report
