CODEV

Test Report Title:	Information for meal planner recipe information screen	Date	26/3/2020
User story:	C14 & C22		

Unit Test Results:

Individual automatic Espresso tests all passed

1 test ran with all the relevant tests due to my branch not having a save feature for the planner. It would just refresh. Hence only one test.

Ran tests to make sure that the relevant data was displayed through the new allergy icons and the reheat information button. Made sure that the portions were visible, and the new recipe star rating displayed.

Ignored some duplication in the user story as the following stories had the same tasks

··· ✓ Tests passed: 1 of 1 test – 41s 496ms

Other Testing done:

Manual tests were carried out to make sure fragment scrolled correctly and formatted properly on screen
